Hatteras Alpha Hedged Strategies Fund

FUND OVERVIEW

The Hatteras Alpha Hedged Strategies Fund (ALPIX or the “Fund”) is designed as a complete, turnkey alternative investment allocation. The Fund serves as a total portfolio diversifier by using a multi-strategy, multi-manager approach.

PERFORMANCE REVIEW

The Fund returned +0.46% for the second quarter of 2017, underperforming the HFRX Global Hedge Index which returned +0.89%. Similar to the first quarter of the year, the second quarter provided a positive setting for risk assets with gains across global equities, global bond markets, and the vast majority of hedge fund strategies. While headlines were dominated by political and geopolitical events, they failed to generate sustained market volatility and equities were driven higher as companies within the S&P 500 reported the highest levels of earnings and revenue growth since 2011. Bond markets also posted gains as credit spreads tightened and longer dated yields ticked lower, while the Federal Reserve executed their second interest rate hike of the year in June. As the quarter unfolded, a combination of hawkish Fed policy and weaker than expected inflation data pushed the U.S. yield curve to its flattest level since 2007.

Hedge fund strategies broadly generated gains during the quarter, with Event Driven and Long/Short Equity strategies catching a tailwind from the market environment, while Managed Futures strategies were challenged by a lack of volatility. These factors were also reflected in the Fund’s quarterly performance.

Event Driven was the Fund’s top contributing strategy for the quarter led by merger arbitrage positions. The Vivaldi Merger Arbitrage Fund benefitted from merger spreads tightening across most sectors during the quarter. By sector, Consumer Staples, Health Care, and Telecom were top contributors. Among the best performing positions for the quarter were Straight Path Communications which received bids from both AT&T and Verizon; NXP Semiconductors as activist investors pushed for a higher bid from Qualcomm; and Whole Foods following the proposed acquisition by Amazon.

Long/Short Equity also added to Fund performance during the period. The Fund’s position in the Hatteras Disciplined Opportunity Fund captured over half of the S&P 500’s quarterly gain while systematically holding portfolio hedges. The strategy’s directional component, which buys S&P 500 call options, drove positive performance as equity markets continued their year to date advance. Put option hedges and options sold to offset the cost of the structure were detractors for the quarter.

Long/Short Debt was flat for the quarter. Within the Loomis Sayles Strategic Alpha Fund, long structured and corporate credit positions were additive, but were offset by losses in energy positions and risk management hedges.

Managed Futures was the Fund’s largest detractor for the quarter. The LoCorr Macro Strategies Fund had losses across both trend following and non-trend following models. Driven by market reversals in late June, short positions in energy markets and long positions in global interest rates were the largest detractors for the quarter. Equity index trades were profitable, benefiting from long positions as global equity markets rallied.

POSITIONING AND OPPORTUNITY

Macro risks, both those well-known and others still evolving, are abundant in today’s market environment and support the case for hedged investment strategies. Those that have persisted for several quarters include historically rich valuations within the equity market and tight credit spreads in the corporate bond market. Restrictive monetary policy has further potential to pressure bond prices. Those that are still in the process of developing include plans for the Federal Reserve to begin reducing their $4.5 trillion balance sheet later this year, and potential challenges regarding the implementation of Trump administration policies which may have been factored into the post-election rally. Any one of these risks has potential to spark market volatility; therefore, we continue to be positioned defensively.

Our conservative stance is present across each of the Fund’s strategies. The Fund’s largest allocation is to an equity strategy with systematic portfolio hedges. The next largest allocation, Event Driven, is focused on low beta merger arbitrage opportunities. Managed Futures can provide an uncorrelated source of returns during more challenging times, and Long/Short Debt exposure provides a low duration, low volatility profile.

As always, we appreciate the continued confidence you have placed in us.

Best regards,
The Hatteras Funds Investment Team

Performance data quoted represents past performance; past performance does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor’s shares, when redeemed, may be worth more or less than their original cost. Current performance of the Fund may be lower or higher than the performance quoted. To obtain performance information current to the most recent month-end, please call 866.388.6292. The average annual returns shown above are historical and reflect changes in share price, reinvested dividends and are net of expenses. Class C returns do not reflect a 1.00% contingent deferred sales charge on shares sold within the first year of purchase and if reflected, would reduce the performance quoted. The average annual returns for Class A Shares “with sales charge” give effect to the deduction of the maximum sales charge of 4.75%. Class A Shares were not in existence prior to May 2, 2011. Class I Shares were not in existence prior to September 30, 2011. Performance for any periods prior to the inception date of Classes A and I, are based on the historical performance of the No Load Shares adjusted to assume the expenses associated with Class A or I Shares, respectively. Net Fund Operating Expenses borne by the investor and paid each year as a percentage of the investment’s value are contractually capped are contractually capped at 2.24% for ALPIX, and 2.49% for APHAX, and 3.24% for APHCX through at least April 30, 2018 and exclude dividends on short positions and interest borrowing, as well as other extraordinary items disclosed in the prospectus. Total Annual Fund Operating Expenses are 2.78% APHAX, 3.53% for APHCX, and 2.53% for ALPIX.
The investment return and principal value of an investment will fluctuate so that an investor’s shares, when redeemed, may be worth more or less than their original cost. Current performance of the Funds may be lower or higher than the performance quoted. For performance information current to the most recent month end, please call 877.569.2382 or visit us at hatterasfunds.com.

Class I Shares (ALPIX) of Alpha Hedged Strategies Fund were not in existence prior to September 30, 2011 and have a minimum investment of $1 million. Performance for any periods prior to the inception date of Class I is based on the historical performance of the No Load Shares adjusted to assume the expenses associated Class I Shares.

Average annual total returns. Periods less than one year are cumulative.

The asset class and strategy return figures presented for the Hatteras Alpha Hedged Strategies Fund indicate how each strategy performed on a stand-alone basis and are not guaranteed as to accuracy. The strategies are part of an Underlying Fund Trust ("UFT") structure. Individual investors may not invest directly in the UFT. The return figures are net of all underlying manager fees and expenses and UFT level fees. However, the strategy return figures do not reflect Hatteras Alpha Hedged Strategies Fund expenses, including fund administration fees, custody fees, fund accounting fees, etc., which would reduce the figures shown. Consequently, the information above was included for educational purposes only and should not be used to evaluate any Hatteras Alpha Hedged Strategies Fund performance. Past performance does not guarantee future results.

Definitions

BofA Merrill Lynch 3-Month U.S. Treasury Bill Index is an unmanaged market index of U.S. Treasury securities maturing in 90 days that assumes reinvestment of all income.

HFRX Global Hedge Fund Index is designed to be representative of the overall composition of the hedge fund universe. It is comprised of all eligible hedge fund strategies; including but not limited to convertible arbitrage, distressed securities, equity hedge, equity market neutral, event driven, macro, merger arbitrage, and relative value arbitrage. The strategies are asset weighted based on the distribution of assets in the hedge fund industry.

Funds in the Morningstar Multialternative Category will use a combination of alternative strategies such as taking long and short positions in equity and debt, trading futures, or using convertible arbitrage, among others.

Standard & Poor’s (S&P) 500 Total Return Index is an unmanaged, un-investible index whose 500 stocks are chosen for market size, liquidity, and industry grouping, among other factors. It is a market value weighted index, with each stock’s weight in the index proportionate to its market value. The S&P 500 is designed to be a leading indicator of U.S. equities and is meant to reflect the risk/return characteristics of the large cap universe. The S&P 500 is a market value weighted index – each stock’s weight in the index is proportionate to its market value.

Important Disclosures and Key Risk Factors

The Fund’s investment objectives, risks, charges and expenses must be considered carefully before investing. The summary prospectus and prospectus contain this and other important information about the investment company, and may be obtained by calling 877.569.2382 or visiting hatterasfunds.com. Read it carefully before investing.

Key Risk Factors: Certain hedging techniques and leverage employed in the management of the Fund may accelerate the velocity of possible losses. Short selling involves the risk of potentially unlimited increase in the market value of the security sold short, which could result in potentially unlimited loss for the Fund. Derivatives involve investment exposure that may exceed the original cost and a small investment in derivatives could have a large potential

Defining Alternatives
impact on the performance of the Fund. Options held in the Fund may be illiquid and the fund manager may have difficulty closing out a position. Exposure to the commodities markets through investment in managed futures programs may subject the Fund to greater volatility than investment in traditional securities. Fixed income instruments are exposed to credit and interest rate risks. Investing in lower-rated (“high-yield”) debt securities involves special risks in addition to the risks associated with investments in higher-rated debt securities, including a high degree of credit risk and liquidity risk. The Fund may also invest in:

- Smaller capitalized companies - subject to more abrupt or erratic market movements than larger, more established companies;
- Foreign securities, which involve currency risk, different accounting standards and are subject to political instability;
- Securities limited to resale to qualified institutional investors, which can affect their degree of liquidity;
- Shares of other investment companies (affiliated) that invest in securities and styles similar to the Fund, resulting in a generally higher investment cost than from investing directly in the underlying shares of these funds;
- Shares of other non-affiliated investment companies primarily including ETFs.

The Fund intends to utilize these individual securities and hedging techniques in matched combinations that are designed to neutralize or offset the individual risks of employing these techniques separately. Some of these matched strategies include merger arbitrage, long/short equity, convertible bond arbitrage and fixed-income arbitrage. There is no assurance that these strategies will protect against losses.

Because the Fund is a fund-of-funds, your cost of investing in the Fund will generally be higher than the cost of investing directly in the shares of the mutual funds in which it invests. By investing in the Fund, you will indirectly bear your share of any fees and expenses charged by the underlying funds, in addition to indirectly bearing the principal risks of the funds. Please refer to the summary prospectus or prospectus for more information about the Fund, including risks, fees and expenses.

Mutual fund investing involves risk; loss of principal is possible. Please consult an investment professional for advice regarding your particular circumstances. An investment in the Fund may not be suitable for all investors.

The Funds are distributed by Hatteras Capital Distributors, LLC, member FINRA/SIPC, an affiliate of Hatteras Funds, LP by virtue of common control or ownership.
